DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Midya et al. (USP 5,801,519). Midya discloses (see figure 6) a maximum power point (14) of a solar panel (10) with a pulse width modulated (PWM) see column 6 and lines 7-24, with introduction of a perturbation into a switching parameter of a converter, and see column 4, lines 23-42, prior art descriptions of the perturbations of the various switching parameters such as duty cycle, frequency are well known in the art. See also column 4 lines 45-68, and column 5, lines 1-15, and also, column 9, lines 15-47.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 7 is rejected under 35 U.S.C. 103(a) as being unpatentable over Midya et al. (USP 5,801,519) in view of Lai et al. (USP 5,617,306)

Midya discloses the claimed invention; see above paragraphs, except for the use of a cuk or septic type converter. Lai discloses that it is known in the art to provide the use of a cuk type converter in a system that utilizes perturbations in the control of the circuit. It would have been obvious to one having ordinary skill in the art at the time of the invention was made to provide the use of a cuk type converter in a system that utilizes perturbations in the control of the circuit of Lai with the a maximum power point of a solar panel in a pulse width modulated circuit of Midya, in order to fully utilize the advantages of the cuk circuit for the control of the perturbations within the circuit.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited prior art discloses the state of the art in the field of maximum power tracking circuit by utilizing the control of the perturbations within the circuit.
